MOJITO

Web Developer Intern Assignment

www.marketingmojito.com

WHY ARE YOU DOING THIS?

● Objective

Your goal is to demonstrate not just your ability to “build what is asked”, but to think like a front-end developer: clean structure, responsiveness, and attention to detail in both code and design.

● Brief

As a shortlisted candidate for the **Web Developer Intern** position at Marketing Mojito, we would like to provide you with a practical assignment that will allow us to assess your abilities in frontend development, React, and Webflow-based design implementation.

This assignment is divided into two parts:

1. A small React-based mini application
2. A Webflow section built from a provided Figma design

We will provide you with the necessary content, logo, and colour scheme.

CONQUER THE CHALLENGE

● Part 1: React Assignment – “Course Finder” Mini App

Your task is to build a simple Course Finder mini application using React.

● Requirements:

1. Core Functionality

- Display a small list of courses (you may use the provided content or create a small JSON list on your own).
- Include a search bar that allows users to filter courses by name or category.
- Use any public API (for example: quotes, images, categories, or similar) and display a small piece of data from that API somewhere in the UI (e.g., a motivational quote, a category tag, etc.).

2. Technical Requirements

- Use React (you may use Create React App, Vite, or Next.js, but keep it simple).
- Use a component-based structure (at least 3 meaningful components).
- Manage state properly (React state or hooks).
- Basic styling using CSS, CSS Modules, or a utility framework like Tailwind (optional).

3. Responsiveness

The app should be responsive for at least the following resolutions:

- 1600px x 900px
- 414px x 749px (mobile view)

4. Deployment

- Deploy the app using any free hosting service such as Vercel or Netlify.
- Ensure the live link is publicly accessible.

CONQUER THE CHALLENGE

Part 2: Webflow Assignment – Section Recreation from Figma

- You will be provided with a Figma file of a single section (for example: a hero/banner or feature section). **[Figma File Link]**
- Your task is to recreate this section in Webflow, maintaining consistency with the provided logo, colour scheme, and typography.

Requirements:

1. Design & Layout

- Recreate the section as closely as possible to the Figma design.
- Maintain proper spacing, alignment, and typography.

2. Interactions

- Add at least one subtle interaction using Webflow (for example: hover effect, looped logo animation, button micro-interaction, or subtle scroll animation).
- Interactions should enhance the experience without being distracting.

3. Responsiveness

Ensure the section is fully responsive and looks good on:

- Desktop
- Mobile (around 414px width)

4. Structure

- Use a clean class naming convention.
- Avoid unnecessary nesting or messy structure.

5. Links to Share

- Webflow preview link.
- Webflow read-only designer link.

FOLLOW THE INSTRUCTIONS

● Focus Areas

While working on the assignment, focus on:

- User experience and clarity
- Visual consistency and clean layout
- Responsive behavior across devices
- Code quality and structure (for React)
- Interaction and animation that feels purposeful, not random

● Submission Guidelines

You can submit your assignment in the following way:

1. React App

- Live URL (Vercel/Netlify, etc.)
- GitHub repository link

2. Webflow Section

- Webflow preview link
- Webflow read-only designer link

3. Brief Note (Optional but Recommended)

A short note (200–300 words) describing:

- What you built
- What API you used in the React app
- What interaction you added in Webflow
- Any challenges you faced and what you would improve with more time

FOLLOW THE INSTRUCTIONS

● Instructions

1. Do not copy & paste complete projects or layouts from sources like W3Schools, CodePen, Envato, or pre-built templates. We want to see your understanding.
2. You are required to set up your own hosting/deployment for the React app (e.g., Vercel/Netlify).
3. Create your own Webflow project under your workspace and use only native Webflow tools for layout and interaction.
4. Use valid, clean, and secure coding practices throughout the test.
5. Ensure both the React app and Webflow section are publicly accessible when you submit.

Recommended time to complete the assignment: 48 Hours from the moment you receive this brief.

● Important Note

This test assignment is designed purely for assessment purposes and is not directly related to any live client project.

Email Subject: Assignment submission for Web Developer Internship at Marketing Mojito`

Please send your submission links (React + Webflow) along with your resume to **hr@marketingmojito.com**

LET'S SEE WHAT YOU GOT

GOOD LUCK!
